

Professional Summary

Dot NET Full Stack Developer with 5.8 years of hands-on experience in designing, developing, and deploying scalable web applications using ASP.NET MVC, ASP.NET Core, Web API, SQL Server, JavaScript, and React. Strong expertise in backend architecture, RESTful API development, database management, and secure application design. Adept at collaborating in Agile environments, translating business requirements into technical solutions, and delivering high-quality enterprise applications.

Tools, System Interoperability, Automation

Employment History

Sr Software Engineer

Aug 2024 — Feb 2026

Swaran Soft

- Collaborated with a team to analyze requirements and design scalable architectures.
 - Developed backend and frontend applications using ASP.NET Core, MVC, Web API, and JavaScript-based UIs.
 - Managed database design, optimization, and API integrations.
 - Collaborated with cross-functional teams following Agile/Scrum practices.
 - Implemented application security, authentication, and authorization mechanisms.
 - Handled version control, deployment, and production support.
 - Worked as an EXL Vendor Developer on enterprise-level projects.

Gurgaon, Haryana, India.

Asp Dot Net Full Stack Developer

Aug 2023 — Jul 2024

Diva Enterprises Private Limited

New Delhi, India

- Involved in analysis, design, and frontend development using HTML, CSS, jQuery, and AJAX. Developed interactive and responsive web applications using AJAX-based components.
 - Integrated backend APIs with frontend modules for seamless data flow.
 - Quickly adapted to new technologies and project requirements.
 - I worked independently.

Green Trans ERP

● New Delhi, India

- Designed and developed web modules using ASP.NET MVC, jQuery, AJAX, HTML, and CSS.
- Built reusable UI components and optimized application performance.
- Participated in requirement analysis and feature implementation.
- Maintained and enhanced logistics and transport management systems.

● Asp Dot Net Application Developer

Jul 2020 — Jun 2022

Biz-Glide Web Solutions

● New Delhi, India

- Participated in end-to-end web application development, including analysis, design, and implementation.
- Developed unit test cases and performed application testing.
- Applied SDLC best practices as a fresher.
- Troubleshooting and resolving application defects and performance issues.

 Projects

● EXL Reinsurance Management System (RMS)

Roles & Responsibilities

- Gathered and analyzed business requirements from the client and prepared detailed **WPS (Work Plan Specification)** documents.
- Collaborated with a team of 6–7 developers to plan and execute development tasks.
- Designed and developed the complete **backend architecture** using **ASP.NET Core / ADO.NET**.
- Developed responsive and dynamic frontend applications using **React.js**, including reusable components, hooks, routing, state management, and API integration.
- Built and maintained **RESTful APIs** for efficient frontend-backend communication.
- Designed the **entire database schema**, including tables, relationships, and normalization.
- Developed and optimized **Stored Procedures, Functions, and SQL queries** for high-performance data operations.
- Worked closely with **React.js developers** for API integration and smooth data flow.
- Managed **end-to-end integration** between frontend and backend systems.
- Performed **debugging, troubleshooting, and performance optimization** for existing modules.
- Deployed the application on **IIS (Internet Information Services)** hosted on **Azure Virtual Machines**, including configuration and publishing.
- Used **GitHub** for version control, code collaboration, and implementing **CI (Continuous Integration)** practices across the development team.
- Monitored and resolved production and deployment-related issues to ensure system stability.
- **Ai/Integration Tools, System Interoperability, Automation**

● Fortis Queue Management System (QMS)

Roles & Responsibilities

- Worked as part of a collaborative development team, contributing to backend development.
- Assisted in designing and developing **RESTful APIs** for queue and token management.
- Implemented backend logic for **real-time queue handling**, including token generation and status updates.
- Developed responsive and dynamic frontend applications using **React.js**, including reusable components, hooks, routing, state management, and API integration.
- Wrote and optimized **SQL queries and stored procedures** for efficient queue data processing.
- Participated in **debugging, testing, and issue resolution** to maintain system stability.
- Supported ongoing enhancements and performance improvements in existing modules.

● Honda 2 Wheelers India

Roles & Responsibilities

- Worked on backend development using **ASP.NET MVC architecture** to implement change requests based on evolving business requirements.
- Participated in **client meetings with the Honda team** to understand requirements, discuss changes, and provide technical inputs.
- Analyzed requirement changes and modified **Controllers, Models, and Views** accordingly.
- Implemented and updated **business logic** to support new features and enhancements.
- Developed and maintained **ADO.NET-based data access layer**, including Stored Procedures, Functions, and SQL queries.
- Performed **impact analysis** before implementing changes to ensure system stability.
- Handled **bug fixing, debugging, and issue resolution** in existing modules.
- Collaborated with team members to ensure smooth functionality and timely delivery of updates.

● Honda BigWing

Roles & Responsibilities

- Worked on backend development using **ASP.NET MVC architecture** to implement change requests based on evolving business requirements.
- Participated in **client meetings with the Honda team** to understand requirements, discuss changes, and provide technical inputs.
- Analyzed requirement changes and modified **Controllers, Models, and Views** accordingly.
- Implemented and updated **business logic** to support new features and enhancements.
- Developed and maintained **ADO.NET-based data access layer**, including Stored Procedures, Functions, and SQL queries.
- Performed **impact analysis** before implementing changes to ensure system stability.
- Handled **bug fixing, debugging, and issue resolution** in existing modules.
- Collaborated with team members to ensure smooth functionality and timely delivery of updates.

● Honda IDTR

Roles & Responsibilities

- Worked in a **small team of 2 developers** (backend + frontend), handling end-to-end project responsibilities.
- Developed responsive and dynamic frontend applications using **React.js**, including reusable components, hooks, routing, state management, and API integration.
- Gathered and analyzed **requirements from the client side** and prepared **WBS (Work Breakdown Structure)** for effective planning and execution.
- Designed the overall **system architecture**, including backend structure and database design.
- Took ownership of **complete backend development** using **ASP.NET Core / ADO.NET**.
- Developed and maintained **RESTful APIs** for seamless frontend-backend communication.
- Designed and implemented the **entire database schema**, including tables, relationships, and Stored Procedures.
- Collaborated closely with the frontend developer to ensure smooth **API integration and UI functionality**.
- Managed **end-to-end development lifecycle** from requirement gathering to deployment.
- Deployed the application to the **Test Environment**, validated functionality, and incorporated client feedback.
- Handled **production deployment** after client approval, ensuring smooth go-live.
- Occasionally contributed to **frontend development** when required.
- Performed **testing, debugging, and performance optimization**.

● Gignaati

Roles & Responsibilities

- Contributed as a backend developer in an **AI-based educational platform** designed for students.
- Developed and integrated a **Payment Gateway module**, including creation of **RESTful APIs** to handle payment processing and data storage.
- Developed responsive and dynamic frontend applications using **React.js**, including reusable components, hooks, routing, state management, and API integration.
- Designed and implemented a **new database structure** for payment management, including tables, relationships, and transaction records.
- Ensured secure and reliable storage of **payment details** in the database using optimized queries and backend logic.
- Built a **custom Email Automation Module (Emailer)** to enhance user engagement.
- Implemented scheduled email functionality to send **automated emails at specific intervals** (e.g., after 1 day, 5 days, 7 days, and 15 days of registration).
- Designed logic to send **access codes and personalized communication** to students based on their registration timeline.
- Created a **separate modular architecture** for the email system to ensure scalability and maintainability.
- Collaborated with team members to integrate modules and ensure smooth application functionality.
- Performed **testing, debugging, and optimization** of newly developed features.
- **Ai/Integration Tools, System Interoperability, Automation**

● Indian Journals

Roles & Responsibilities

- Worked on a **publication management system** supporting the complete lifecycle of academic content, including **article and book publishing to e-book generation**.
- Provided **end-to-end support** for the publication workflow, ensuring smooth processing from submission to final digital publishing.
- Gathered and analyzed **business requirements** and implemented new features based on client needs.
- Developed and enhanced **backend modules** to support publishing operations and workflow automation.
- Integrated the in-house system with **Zoho Books CRM** for financial and operational management.
- Designed and implemented **APIs and data synchronization logic** for seamless integration with Zoho.
- Created new modules to improve system functionality and efficiency.
- Collaborated with cross-functional teams to ensure smooth integration and system performance.
- Performed **testing, debugging, and maintenance** to ensure application stability.

● Green Trans ERP

Roles & Responsibilities

- Worked on a **logistics and transportation management system (ERP/CRM-based solution)** supporting end-to-end operations.
- Developed and customized modules based on **daily business requirements**.
- Designed and implemented **new functionalities** to improve system efficiency.
- Worked extensively on the **reporting module using RDLC (.NET client-side reporting)**.
- Designed and developed **dynamic and data-driven reports** based on business needs.
- Created and optimized **Stored Procedures and SQL queries** for report data sources.
- Developed **master forms** for data entry, validation, and management.
- Handled backend logic using **ADO.NET** for data processing.
- Collaborated with stakeholders to deliver **customized reporting solutions**.
- Performed **debugging, performance tuning, and system enhancements**.

● Call-2-Shift (Employee shift & transportation management)

Roles & Responsibilities

- Worked as a **fresher developer** in the initial phase of my career, contributing to development tasks under guidance.
- Assisted in developing **new forms and modules** based on business requirements.
- Implemented **basic backend functionalities and methods** to support application features.
- Contributed to **feature enhancements and small-scale implementations** in the system.
- Gained hands-on experience in **ASP.NET / ADO.NET development practices**.
- Participated in **bug fixing and minor issue resolution**.
- Collaborated with team members to understand project flow and improve development skills.

Education

● Master of Computer Application (MCA)

DIT University

Jun 2018 — Jul 2020

♥ Dehradun, Uttarakhand

● Bachelor of Computer Application (BCA)

Indraprastha Institute of Technology & Management

Jun 2015 — Jul 2018

♥ Delhi
